

A  
PROJECT REPORT  
ON

**“Bag Shop”**

SUBMITTED TO  
**Shivaji University, Kolhapur**

IN THE PARTIAL FULFILLMENT OF REQUIREMENT FOR  
THE AWARD OF DEGREE OF  
BACHELOR OF SCIENCE IN COMPUTER SCIENCE

BY  
**Mr. Prathamesh Rajendra Gavandi**

Under the guidance of  
**Prof. Devarde K. P.**

**DECCAN EDUCATION SOCIETY, PUNE**

**Willingdon College, Sangli**

**Academic Year:2023-24**

Deccan Education Society, Pune

## Willingdon College, Sangli

### CERTIFICATE

This is to certify that the project entitled “**Bag Shop**” submitted by **Mr. Prathamesh Rajendra Gavandi** in partial fulfillment of the requirement of the award of degree **B.Sc. Computer Science [Optional]** to Shivaji University, Kolhapur has been carried out by them under my guidance satisfactorily completed during the academic year 2023-2024.

Place : Sangli

Date :

**Prof. Devarde K. P.**

Project Guide

**Prof. Mane A.M.**

Coordinator

Examiner: 1. \_\_\_\_\_

2. \_\_\_\_\_

# DECLARATION

To,

The Principal,  
Willingdon College,  
Sangli.

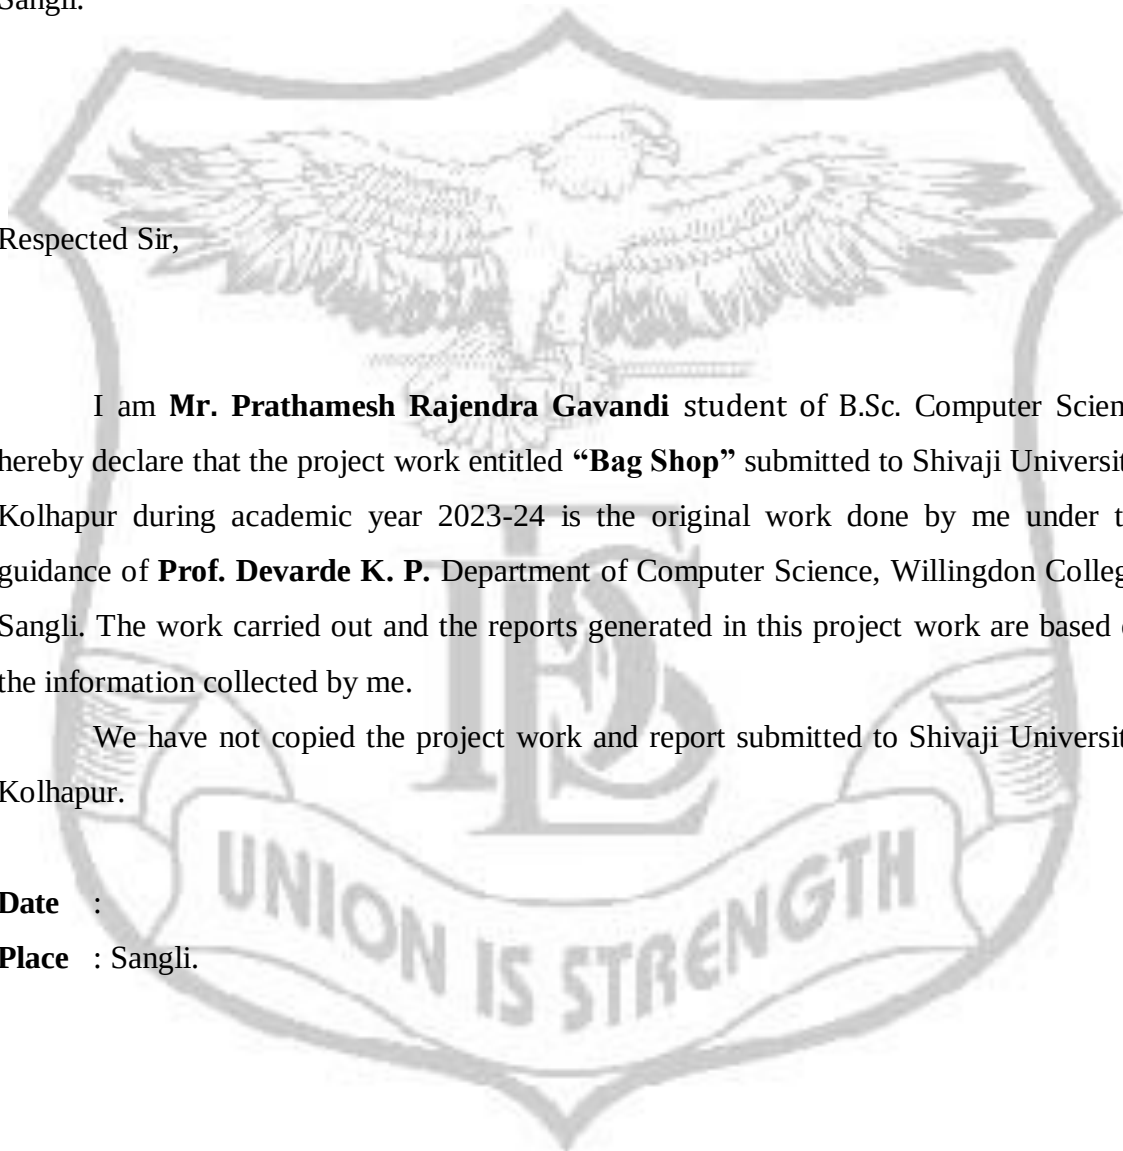

Respected Sir,

I am **Mr. Prathamesh Rajendra Gavandi** student of B.Sc. Computer Science hereby declare that the project work entitled “**Bag Shop**” submitted to Shivaji University, Kolhapur during academic year 2023-24 is the original work done by me under the guidance of **Prof. Devarde K. P.** Department of Computer Science, Willingdon College, Sangli. The work carried out and the reports generated in this project work are based on the information collected by me.

We have not copied the project work and report submitted to Shivaji University, Kolhapur.

**Date :**

**Place :** Sangli.

## ACKNOWLEDGEMENT

It gives us great pleasure to express gratitude to **Prof. Devarde K.P.** for his valuable guidance and suggestion while preparing this project.

I am thankful to **Prof. Mane A. M.** Coordinator, Department of B.Sc. Computer Science [Optional], Willingdon College, Sangli for making available all the required resources and kind co-operation in my project work.

I wish to express my sincere thanks to **Dr. Tamhankar B. V.** Principal, Willingdon College, Sangli, all teaching and non-teaching staff of Department of B. Sc. Computer Science [Optional] for their extraordinary help through out period of my project. We are also thankful to those who helped us directly-indirectly in completion of this works successfully.

Place :Sangli

Date :

**Mr. Prathamesh Rajendra Gavandi**

# 1.Introduction

## **1.1 STATEMENT OF THE PROBLEM**

We are developing a website named Bags Shop. The main objective behind this project is to develop a web oriented application which can provide a shopping features to use the users. Through the system visitors are able to view different type of products available in the shop like different brands. User also able to make payment for their purchase.

In this project there are three different modules named admin, user and customer. Admin manages all the modules. He adds different products to the system user view the website and do registration for the system. Now they become customer and they are able to login the website through username and password. They can also view their previous order and also be able to Users pay for their purchase and do online payment or cash on delivery, users also give their valuable feedback. Now the customer can view and select any brand through this website about name, price and much more.

### **OBJECTIVES:**

- It is an online & offline Store which enables website owner to sell their product online.
- The system helps the customer to purchase the product in bulk or Single order.
- It provides a fast delivery.
- This web application generates reports for the owner of website.

## **1.2 EXISTING SYSTEM**

- Reports are prepared manually and when needed. Maintaining of reports is very tedious task.
- To buy any product user has to collect information about it either by visiting the shop or asking people which is the better-one.
- There is no computer system for handling payments. All calculations are performed manually which may not be accurate.
- Always Maintaining the record is really a tedious task.
- This system is very complicated to handle with paperwork.
- The system takes much time to find, modify particular records of product.
- As it is handled manually there is possibility of making mistakes in handling information.

### **LIMITATION:**

1. All work consider manually.
2. It is very difficult to know that needed things are available or not in that particular shop.
3. In Manual System Customer has got the Bag shop.
4. Difficult to maintain the details of Customer and Products.
5. Receipt in Register.
6. It is time-consuming process which increased workload and reduces the Speed of work.
7. Shopkeeper cannot generate any type of reports in different format.
8. The data which is stored manually can be lost anytime.

## **1.3 NEED AND SCOPE OF COMPUTER SYSTEM**

### **INTRODUCTION:**

It is always necessary for any system to be very short and easy to operate. Any manual system is quite complex and time oriented and this processes is not exceptional. So, a computer system overcomes various limitations of a manual system. Through ecommerce, online business have been able to widen the circle of their customers both nationally and internationally.

- \*It can reach to more audience.

- \*It provides better information.

- \*It can display various products.

- \*Anyone with internet access can view and purchase products on a website.

## **MODULES TO BE IMPLEMENTED**

### **IMPLEMENTATION STEPS :**

#### **1) Admin Authentication:**

This module is mainly based on admin. System will check the admin username and password for authentication. After the verification for authorization the admin can be able to precede the process. All works are done under his control.

#### **2) Registration module:**

The registration process of customers, shopkeeper is implemented under this module. This module covers the details about the registration of users which they can be register by it self by adding data like name, password, email id, contact and further details.

#### **3) Login /Log Out Module:**

This is used to logged in different users like admin. After registration they can be sign in by their username and password and log out from the system.

#### **4) Add Product Module:**

Shopkeeper can add new products and information about those products to the web site using this module.

#### **5) Enquiry Module:**

Using this module user can do enquiry about products provided by shops.

**6) Add to Cart Module:**

The selected products by customers can be added in cart which he wants to buy and their order for product will get placed.

**7) Order Module:**

By using this module user can order various products provided by that shop.

**8) Payment Module:**

User can make payment to that particular shopkeeper in different type of Payment options like Cash on Delivery and UPI.

**9) Cancel Module:**

Using this module customer can cancel their order.

**10) Feedback and Complaint Module:**

Customers can give feedback and complaint about the products

# 2. Proposed System

## **2.1 OBJECTIVES:**

- Online shopping Portal is specific requirement of the client that integrates the buy inland selling services especially to their customers.
- Need for the new system is due to major drawbacks of existing system.
- Reports can be generated data anytime within few seconds, so that manual labor is not required, and also analysis can be performed much more frequently which helps in taking decisions.
- The details regarding all users, products can also be maintained as their information is very helpful and sometimes becomes a critical requirement.
- Allows user to get registered from their places and transact for the required product.
- To overcome these problems in existing system we develop "Online Shopping Portal for branded bag".

## **ADVANTAGES OF PROPOSED SYSTEM:**

1. Customers can easily search shops and products are available in that shop.
2. It is not required visiting the place for registration.
3. The important reason to make the work easier ,faster and less time consuming
4. It is computerized system.
5. Here he user can save his money by buying the products in the offer.
6. It is not required visiting the shop for purchasing products.
7. User can get the required products from their place this is time saving process.
8. Shopkeeper can deliver the products by customer requirements.
9. Shopkeeper can easily maintain up to date information.
10. To generate better reports for requirement.

## 2.2 REQUIREMENT ENGINEERING

### SRS : Bag Shop

**Software Requirement Specifications** are more precise descriptions of the systems functionality and the constraints on its operation. They are intended to specify the system for software designers so they are sometimes called “functional specification”.

A Software Requirement Specification may be the basis of a contract between the developer and client. It should not be ambiguous or informal as this may lead to misinterpretation by the client or developer.

Many of the problems of Software Engineering are difficulties with the requirements specification. It is natural for a system developer to interpret an ambiguous requirement so that its realization is as cheap as possible.

Software Requirements Specifications add further information to the requirements specification. The requirements specification is usually presented with the system models developed during requirements analysis. The specification plus the model should describe the system to be designed and implemented. It should include all necessary information about what the system must do and all constraints on its operations.

## **SOFTWARE REQUIREMENT:**

### **❖ ASP.NET:**

ASP.NET is a server-side technology which provides services to create, deploy, and execute web applications, and web services. A web service is an application that can be invoked programmatically and expose some service on the web. They use standard Internet Communication protocol like XML and SOAP. Web services support a distributed computing platform for the web.

Web applications are created using Web Forms in ASP.NET. ASP.NET provides object-oriented execution model. The execution of application is under CLR. ASP.NET application also need to be hosted on IIS (Internet Information Services). But for development purpose ASP.NET has an in-built ASP.NET Development Server for testing and running a web page during a development stage. ASP.NET development server is included with Visual Web Developer, is a web server that runs locally on Windows Operating System. It is specifically built to serve or run ASP. NET web under the local host scenario.

In other words, the ASP.NET Development Server will serve pages to browser requests on local computer. It will not serve pages to another computer.

ASP.NET follows a code behind model. User Interface is separated from code.

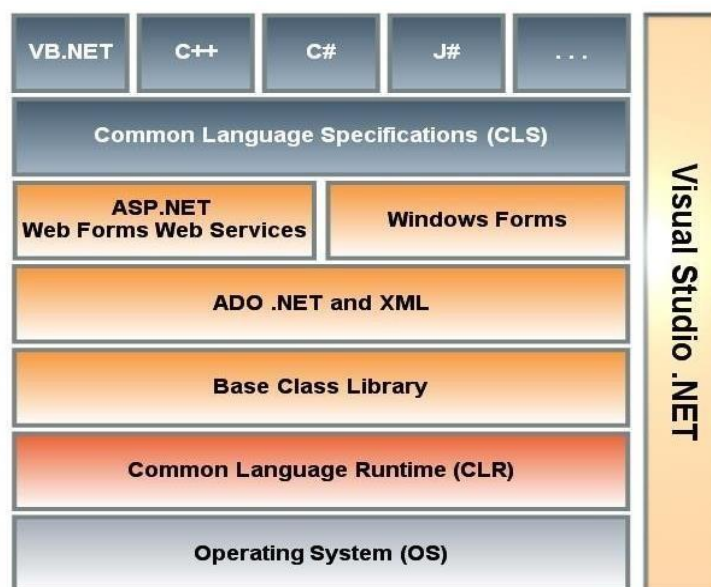

Code for the page and the events can be written in C# or VB.NET or J#.

## **FEATURES OF ASP.NET:**

- We can create applications such as windows applications, web applications, console applications and mobile applications which has user interface.
- The former lets you create mobile based web application were as the later lets you right application for pocket PC or others windows CE.
- Based devices which run on a stripped-down version of framework (compact framework).

- Simple programming object-oriented model built on .NET – Less code needs to be written, hence easier to create and maintain. There is separation of code and User Interface.
- Multi browser support – ASP.NET supports multiple browsers.
- Web forms and Web services –Web application can be created very easily using Web Forms. Rich set of controls are available to make the application interactive. New controls like validation controls, login controls, and many more available to make the developers easy.
- Session management and caching– Session management allows web server to identify each users request uniquely, thus knows the current state of the user. If multiple users request the same web page at the same time, then performance can be improved by storing that page in the dedicated memory known as cache.
- Security –ASP.NET provides features like authentication and authorization to make the web Application secure.

### **DOT NET Framework:**

- XML configuration–Configuration settings related to web and machine are stored in XML format.

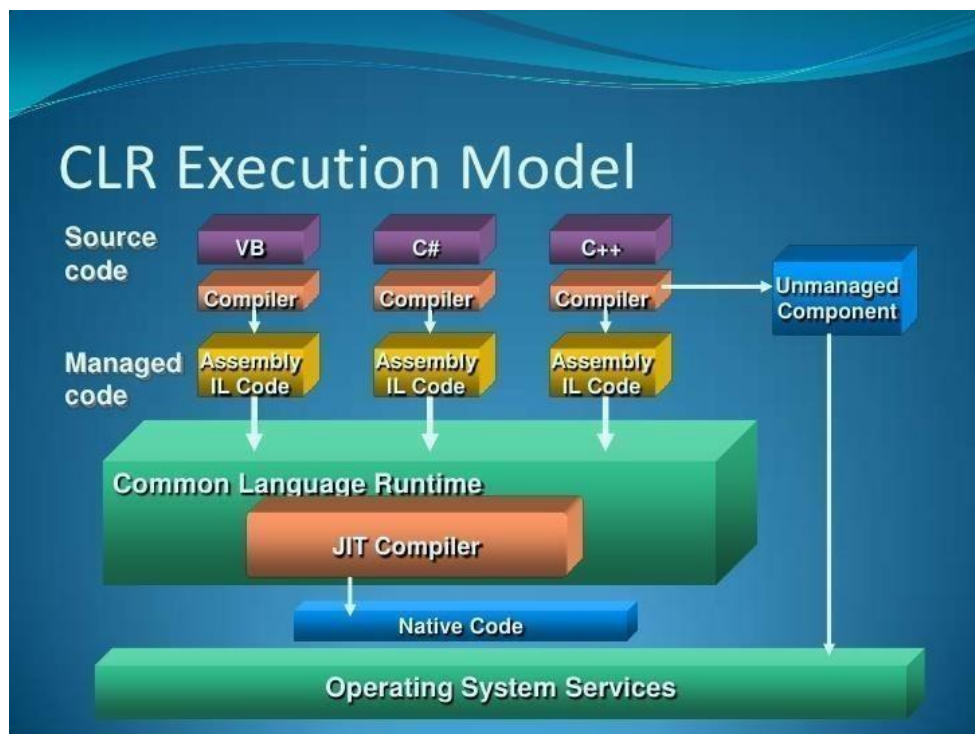

### ❖ C#LANGUAGE:

- C# language is intended to be simple, modern, general purpose, object –oriented programming language.
- The language and implementations there of should provide support for software engineering principles such as strong type checking, array bound checking, detection of attempts to use uninitialized variables, and automatic garbage collection. Software robustness, durability and programmer productivity are important.
- The language is intended for use in developing software components suitable for deployment in distributed environments.
- Source code portability is very important, as is programmers already familiar with C and C++.
- Support for internationalization is very important.
- C# is intended to be suitable for writing applications for both hosted and embedded systems, ranging from the very large that use sophisticated operating system, down to the very small having dedicated functions.
- Although C# applications are intended to be economical with regard to memory and processing power requirements, the language was not intended to compete directly on
- Performance and size with C or assembly language.

## COMMON LANGUAGE RUNTIME(CLR) :

- The common language runtime is responsible for managing and executing code written for the .NET Framework. Code that's compiled with the variety of programming languages. The runtime is responsible for overseeing all aspects of code execution.

### ❖ **SQLSERVER:**

SQL server is used as Backend to manage the database. SQL is used to create, maintain and fire query on relational database by using the regular English words for its commands, which makes it easy to use.

- SQL is declarative i.e., you specify what kind of data you want, and then RDBMS is responsible for figuring out the data.
- SQL is based on set theory, relational operators such as AND, OR, NOT are used to perform operations on the data.
- SQL includes all arithmetic operations, predicates for comparison, string matching, summary operations, group by and having clause etc.
- SQL provides a view of the specification of database operation that would produce a desired table.
- SQL is generally used in multi-user system, where user will login by using Authentication ID's. Actions in SQL environments are created to a specific authorization ID, which usually corresponds to a user.

### **SQL IS AVAILABLE IN TWO FORMS:**

#### 1) Interactive SQL:

It is used to operate directly on a database to produce output. Here once you enter the command, you can see the output immediately.

#### 2) Embedded SQL:

It consists of SQL command put inside programs that are written in other languages. The output of SQL command is embedded in SQL and is passed off to the variables or parameters used by programs in which it is embedded.

## **SQL COMMAND ARE CATEGORIZED AS:**

### **1. Data Definition Language (DDL):**

It consists of those commands that create objects such as table in database. The database schema is specified by the set of definitions expressed by special language called data definition language. The compilation of DDL statements is a set of tables.

### **2. Data Manipulation Language (DML):**

DML is :

1. Retrieval of information stored in database.
2. Insertion of new information into the
3. Deletion of information from the database.
4. Modification of information stored in database.

### **3. Data Control Language (DCL):**

It consists of features that determine whether a user is permitted to perform a particular action.

# 3. System Analysis

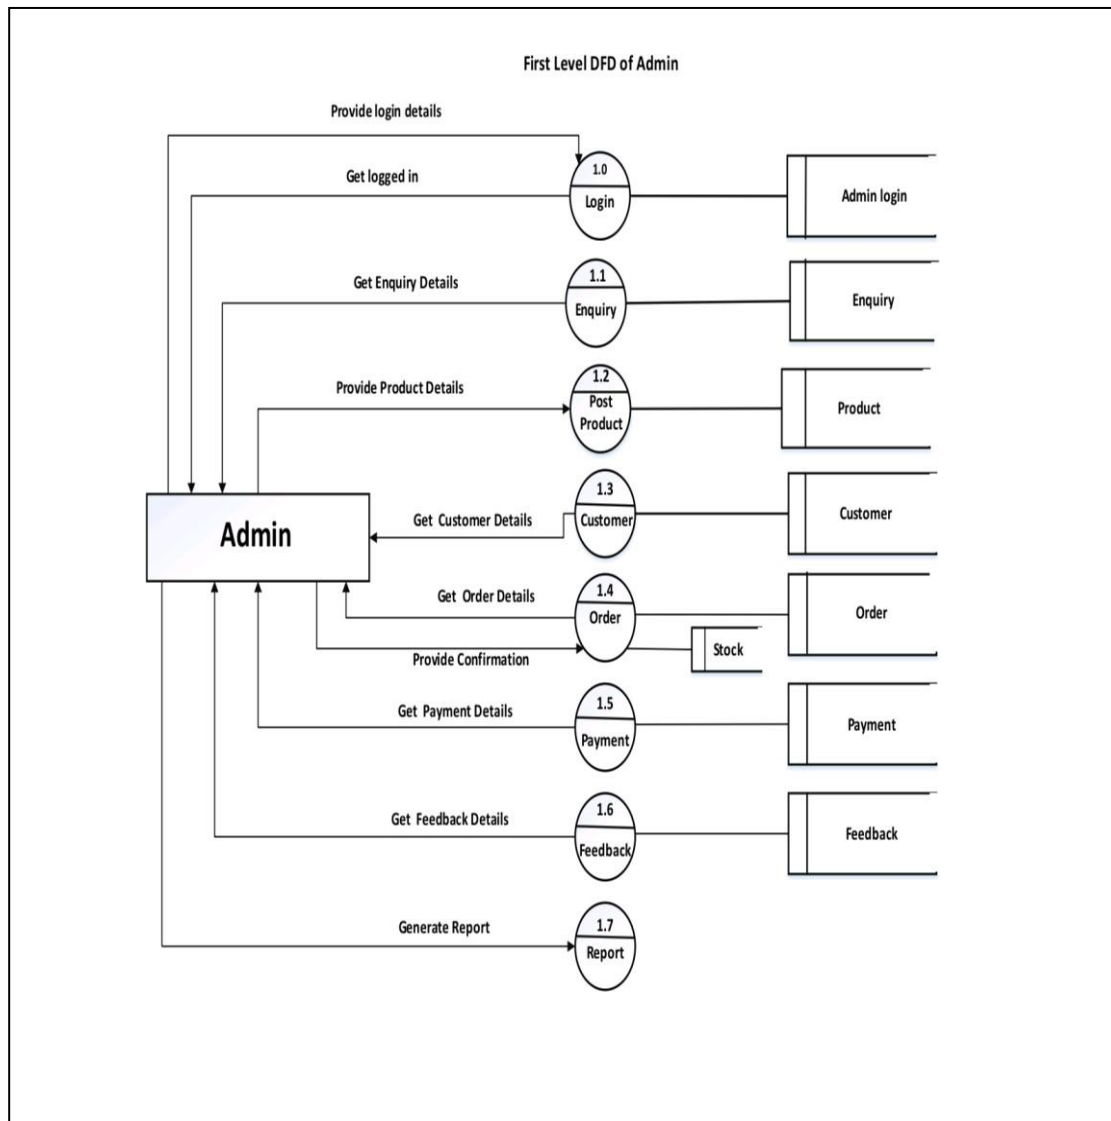

### 3.1 DFD:

DFD is also known as 'Bubble Chart'. Its purpose is to classify system requirement and identifying major transformation that will become program in a system design. So, it is a starting point of the design phase that functionality decomposes the requirements specifications down to the lowest level of the detail. A DFD consists of series of bubbles joined by lines. The bubbles represent data transmission and line represents data flow in the system.

#### First Level Data flow Diagram :

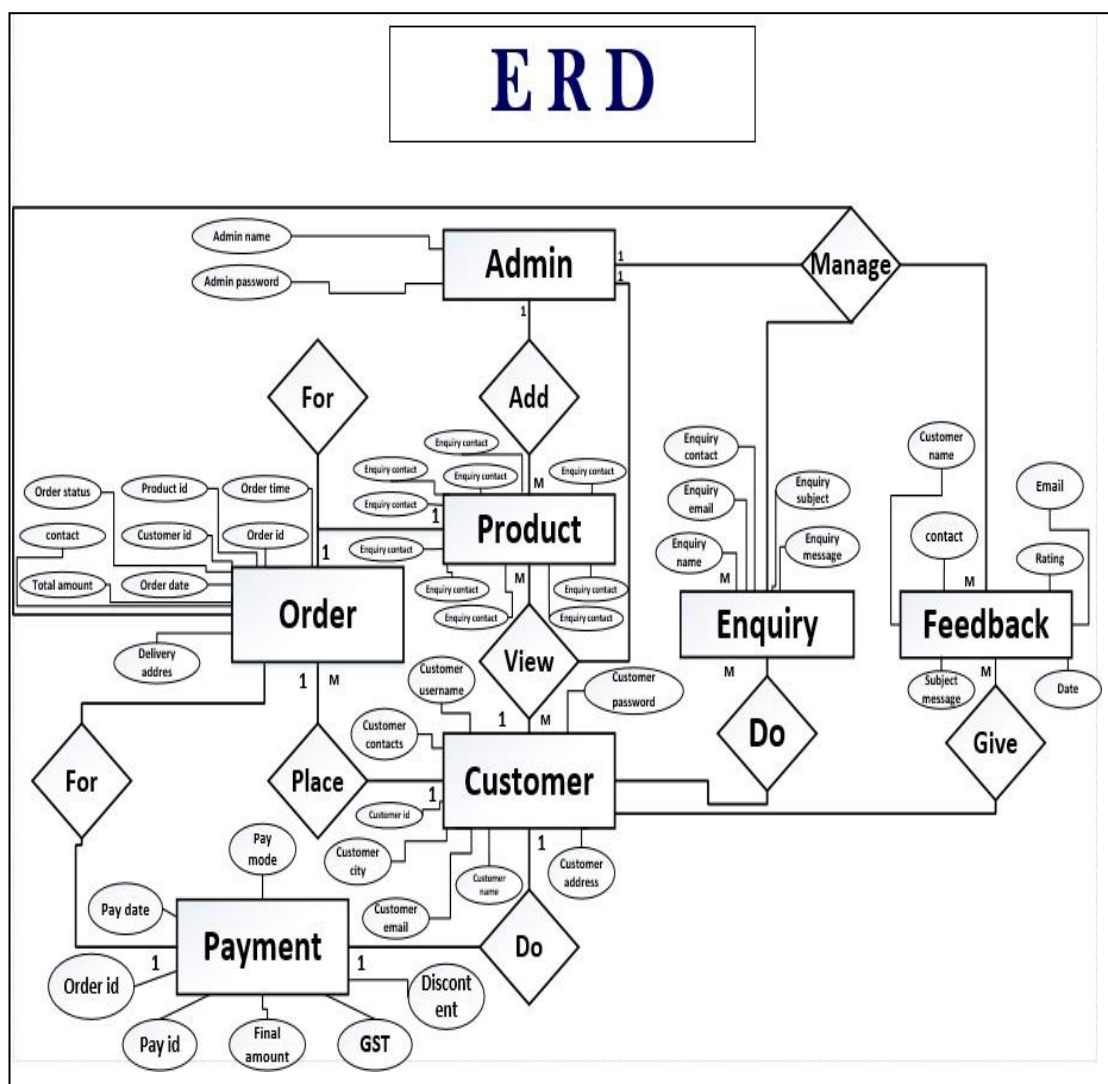

### First Level Dataflow Diagram :

### 3.2 ENTITY RELATIONSHIP DIAGRAM:

Entity relationship diagram graphically represent overall logical structure of database which includes interactions between entity of various ways. Entity relationship (ERD) illustrates the logical structure of database. Entity relationship ERD's in 1976 since then Charles Bachman and James Martin have added some slight refinements to the basic ERD principles.

# 4. System Design

## 4.1 DATABASE DESIGN:

TABLE 1- ADMIN

|    | Name          | Data Type   | Allow Nulls              | Default |
|----|---------------|-------------|--------------------------|---------|
| PK | Adminname     | varchar(50) | <input type="checkbox"/> |         |
|    | Adminpassword | varchar(50) | <input type="checkbox"/> |         |
|    |               |             | <input type="checkbox"/> |         |

TABLE 2- ENQUIRY

|    | Name     | Data Type    | Allow Nulls              | Default |
|----|----------|--------------|--------------------------|---------|
| PK | Ename    | varchar(30)  | <input type="checkbox"/> |         |
|    | Email    | varchar(50)  | <input type="checkbox"/> |         |
|    | Econtact | bigint       | <input type="checkbox"/> |         |
|    | Esubject | varchar(50)  | <input type="checkbox"/> |         |
|    | Emessage | varchar(MAX) | <input type="checkbox"/> |         |
|    | Eaddress | varchar(50)  | <input type="checkbox"/> |         |

TABLE 3- FEEDBACK

|  | Name            | Data Type    | Allow Nulls              | Default |
|--|-----------------|--------------|--------------------------|---------|
|  | Name            | varchar(30)  | <input type="checkbox"/> |         |
|  | Email           | varchar(50)  | <input type="checkbox"/> |         |
|  | Contact         | bigint       | <input type="checkbox"/> |         |
|  | Productquality  | varchar(20)  | <input type="checkbox"/> |         |
|  | Productprice    | varchar(20)  | <input type="checkbox"/> |         |
|  | Processorder    | varchar(20)  | <input type="checkbox"/> |         |
|  | Deliveryservice | varchar(20)  | <input type="checkbox"/> |         |
|  | Date            | varchar(30)  | <input type="checkbox"/> |         |
|  | Suggestion      | varchar(MAX) | <input type="checkbox"/> |         |

TABLE 4- CATEGORY

|    | Name     | Data Type    | Allow Nulls              | Default |
|----|----------|--------------|--------------------------|---------|
| PK | Catid    | int          | <input type="checkbox"/> |         |
|    | Catname  | varchar(100) | <input type="checkbox"/> |         |
|    | Catimage | varchar(MAX) | <input type="checkbox"/> |         |
|    | Catinfo  | varchar(MAX) | <input type="checkbox"/> |         |

**TABLE 5- PRODUCT**

|                                                                                   | Name           | Data Type    | Allow Nulls                         | Default |
|-----------------------------------------------------------------------------------|----------------|--------------|-------------------------------------|---------|
|  | Pid            | int          | <input type="checkbox"/>            |         |
|                                                                                   | Pname          | varchar(MAX) | <input type="checkbox"/>            |         |
|                                                                                   | Pcatagery      | varchar(100) | <input type="checkbox"/>            |         |
|                                                                                   | Price          | float        | <input type="checkbox"/>            |         |
|                                                                                   | Pspecification | varchar(MAX) | <input type="checkbox"/>            |         |
|                                                                                   | Image          | varchar(MAX) | <input type="checkbox"/>            |         |
|                                                                                   | Stock          | int          | <input checked="" type="checkbox"/> |         |

**TABLE 6- CARTDETAILS**

|  | Name     | Data Type    | Allow Nulls                         | Default |
|--|----------|--------------|-------------------------------------|---------|
|  | Pid      | int          | <input checked="" type="checkbox"/> |         |
|  | Catagery | varchar(50)  | <input checked="" type="checkbox"/> |         |
|  | Pname    | varchar(MAX) | <input checked="" type="checkbox"/> |         |
|  | Username | varchar(50)  | <input checked="" type="checkbox"/> |         |
|  | Price    | float        | <input type="checkbox"/>            |         |
|  | Quantity | int          | <input checked="" type="checkbox"/> |         |
|  | Total    | float        | <input checked="" type="checkbox"/> |         |

**TABLE 7- REGISTRATION**

|  | Name      | Data Type   | Allow Nulls                         | Default |
|--|-----------|-------------|-------------------------------------|---------|
|  | Name      | varchar(50) | <input checked="" type="checkbox"/> |         |
|  | contactno | bigint      | <input checked="" type="checkbox"/> |         |
|  | email     | varchar(50) | <input checked="" type="checkbox"/> |         |
|  | address   | varchar(50) | <input checked="" type="checkbox"/> |         |
|  | city      | varchar(20) | <input checked="" type="checkbox"/> |         |
|  | password  | varchar(50) | <input checked="" type="checkbox"/> |         |
|  | username  | varchar(50) | <input checked="" type="checkbox"/> |         |

**Table 8 – Cart**

|                                                                                   | Name    | Data Type   | Allow Nulls                         | Default |
|-----------------------------------------------------------------------------------|---------|-------------|-------------------------------------|---------|
|  | Pname   | varchar(50) | <input type="checkbox"/>            |         |
|                                                                                   | Catname | varchar(50) | <input checked="" type="checkbox"/> |         |
|                                                                                   | Pid     | int         | <input checked="" type="checkbox"/> |         |

**Table 9–Order**

# 4.2 Input Design

## USER PANEL:

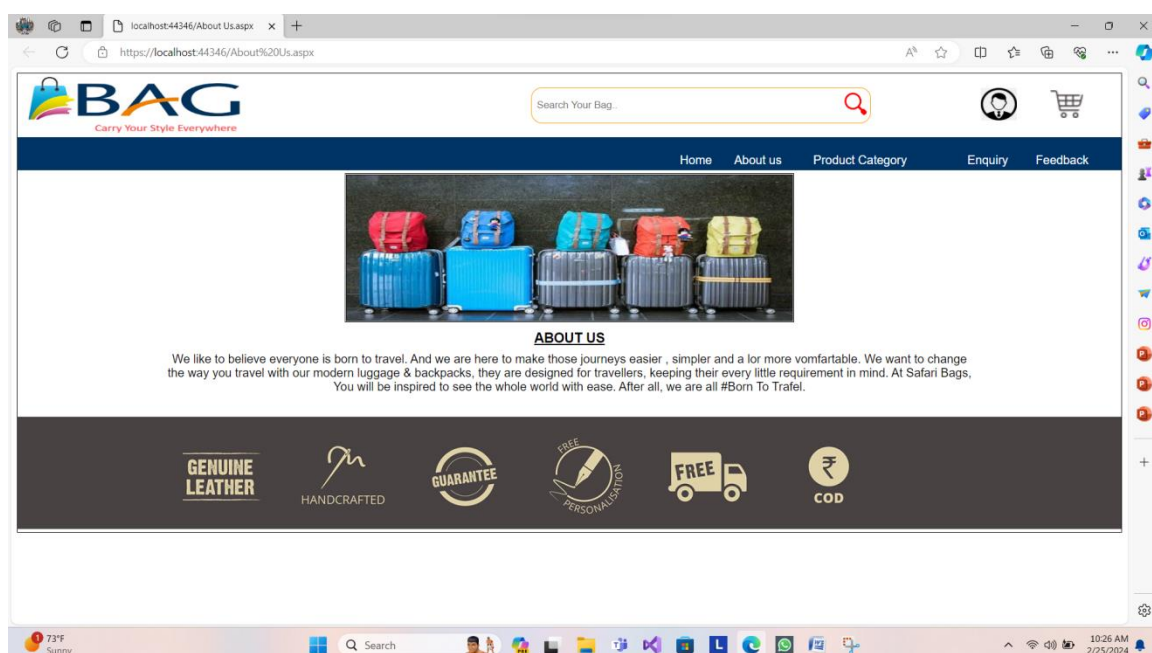

### User Home Page

This is the home page of our website. Every visitor to our website can view this page regardless whether he/she has registered or not.

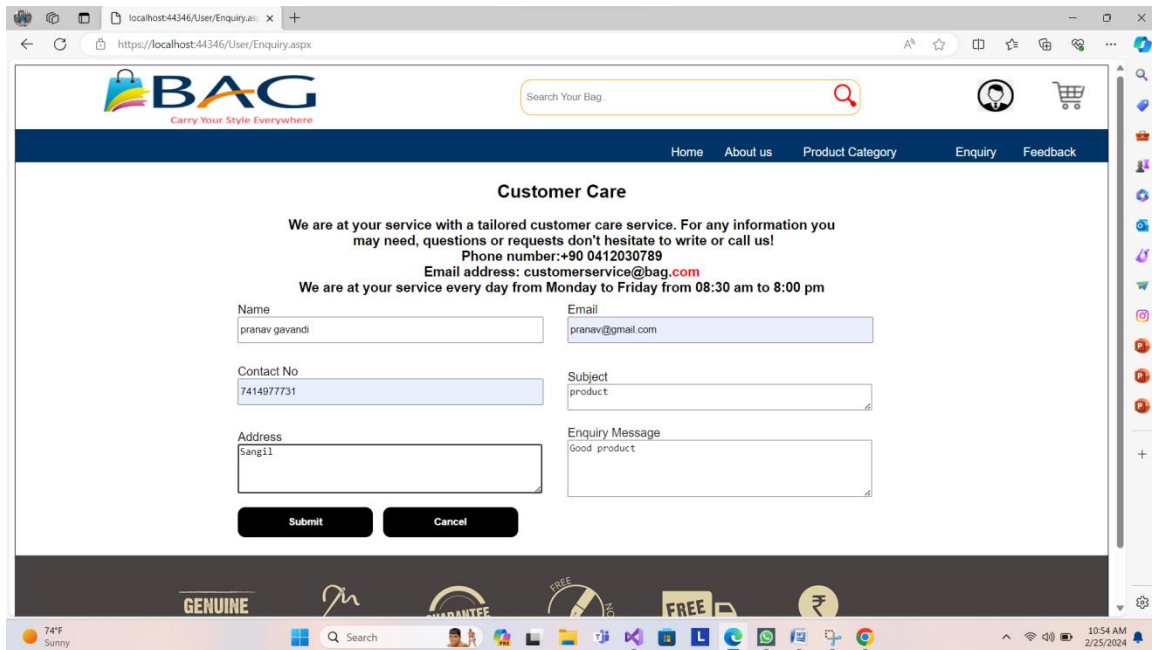

### About Us:

This is a static page, that gives information of our website, our vision and our mission.

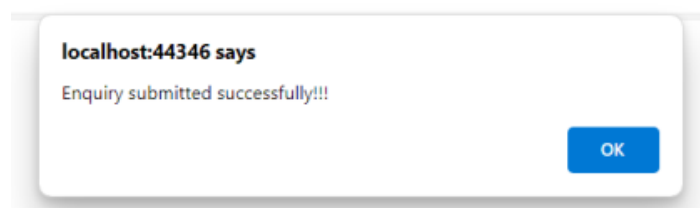

## Contact Us:

User can enquire or contact us with this page with all his queries. After submitting the enquiry, a message is displayed.

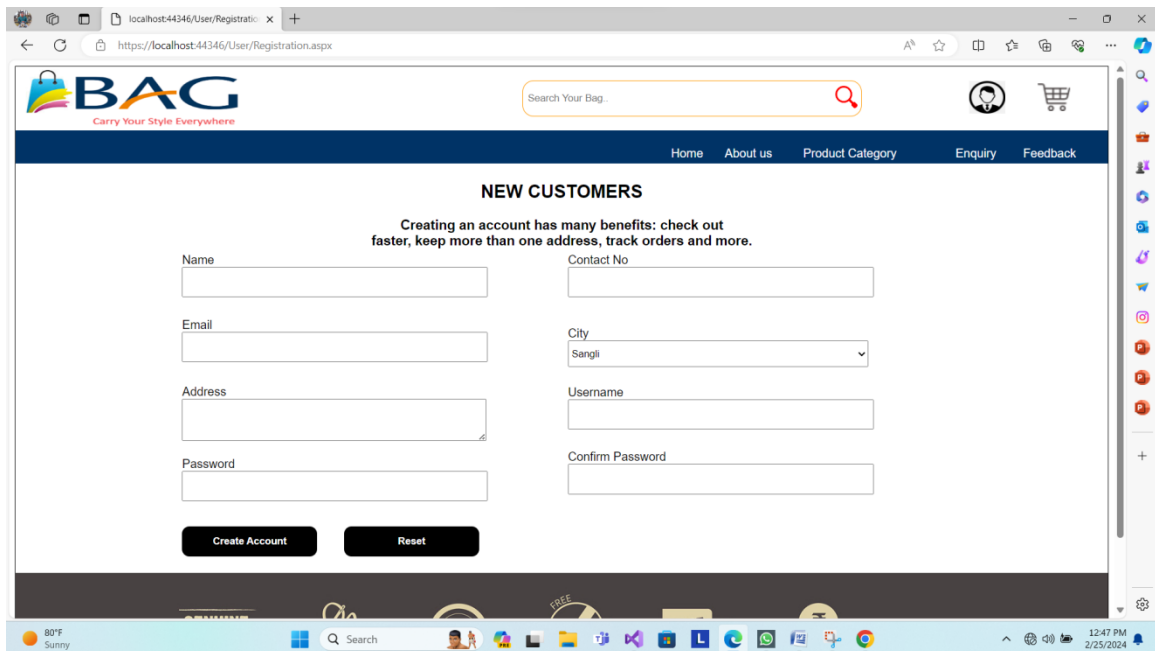

The screenshot shows a web browser window displaying the 'BAG' website's 'Customer Care' enquiry page. The browser's address bar shows 'https://localhost:44346/User/Enquiry.aspx'. The website header includes the 'BAG' logo with the tagline 'Carry Your Style Everywhere', a search bar, and navigation links: Home, About us, Product Category, Enquiry, and Feedback. The main content area is titled 'Customer Care' and contains the following text: 'We are at your service with a tailored customer care service. For any information you may need, questions or requests don't hesitate to write or call us! Phone number: +90 0412030789 Email address: customerservice@bag.com We are at your service every day from Monday to Friday from 08:30 am to 8:00 pm'. Below this text is a form with five input fields: 'Name' (filled with 'pranav gavandi'), 'Email' (filled with 'pranav@gmail.com'), 'Contact No' (filled with '7414977731'), 'Subject' (filled with 'product'), and 'Address' (filled with 'Sangli'). There is also a larger 'Enquiry Message' text area filled with 'Good product'. At the bottom of the form are 'Submit' and 'Cancel' buttons. The website footer features the words 'GENUINE', 'WARRANTY', and 'FREE' along with a rupee symbol. The Windows taskbar at the bottom shows the date as 2/25/2024 and the time as 10:54 AM.

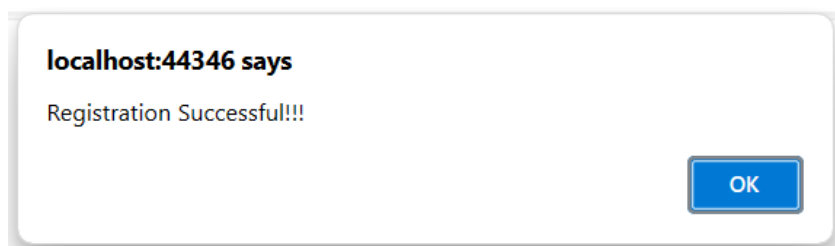

## Customer Registration:

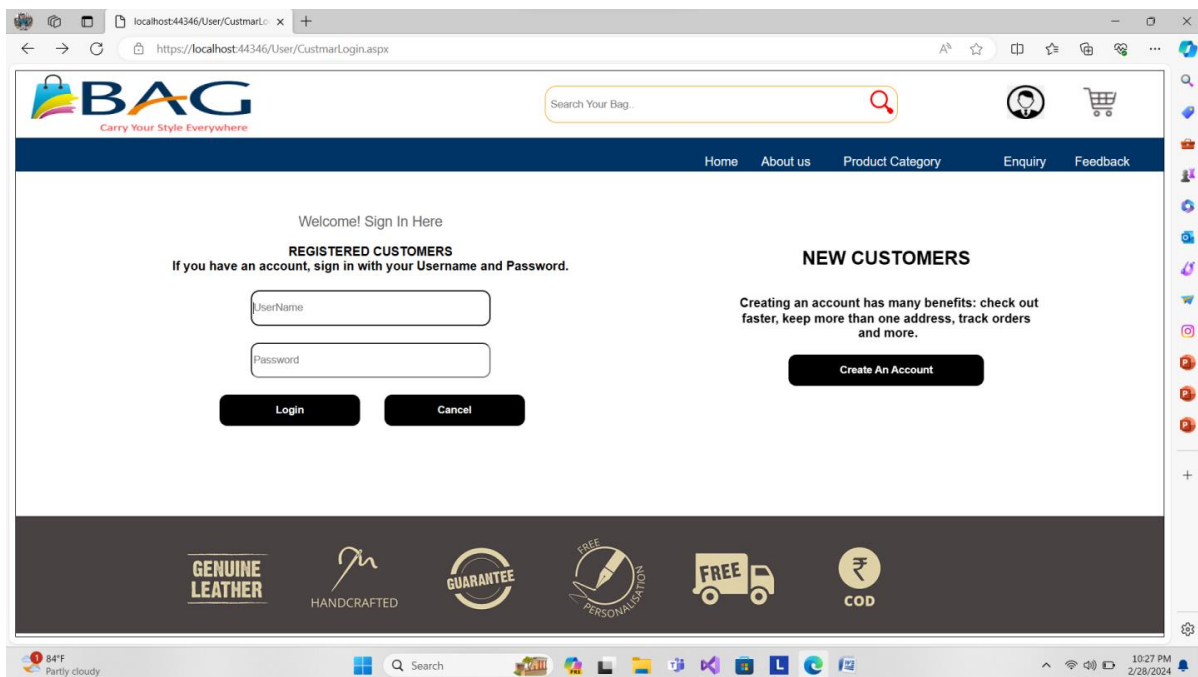

The screenshot shows a web browser window with the URL `https://localhost:44346/User/Registration.aspx`. The page features the BAG logo with the tagline "Carry Your Style Everywhere". A search bar is located at the top right. Below the logo, there is a navigation menu with links: Home, About us, Product Category, Enquiry, and Feedback. The main heading is "NEW CUSTOMERS". Below this, a message states: "Creating an account has many benefits: check out faster, keep more than one address, track orders and more." The registration form consists of two columns of input fields: Name, Contact No, Email, City (a dropdown menu showing "Sangli"), Address, Username, Password, and Confirm Password. At the bottom of the form are two buttons: "Create Account" and "Reset". The browser's taskbar at the bottom shows the system clock as 12:47 PM on 2/25/2024.

After clicking on Create Account, it will give the Registration alert.

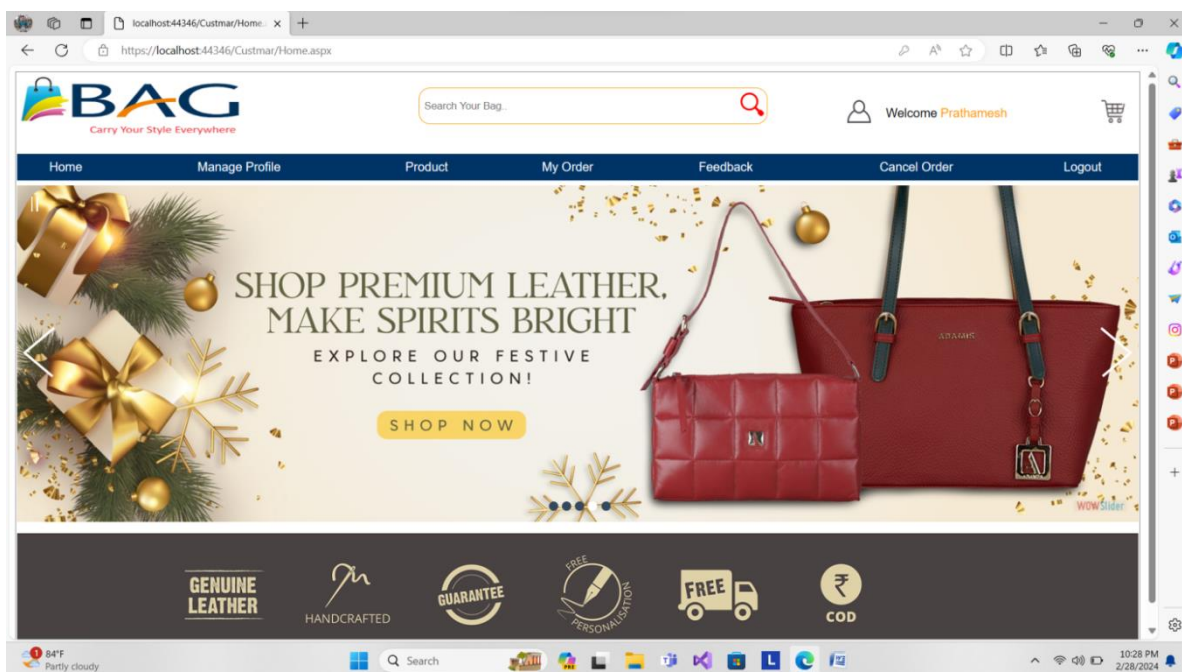

After that user will be the customer of the website after sign in with user name and password

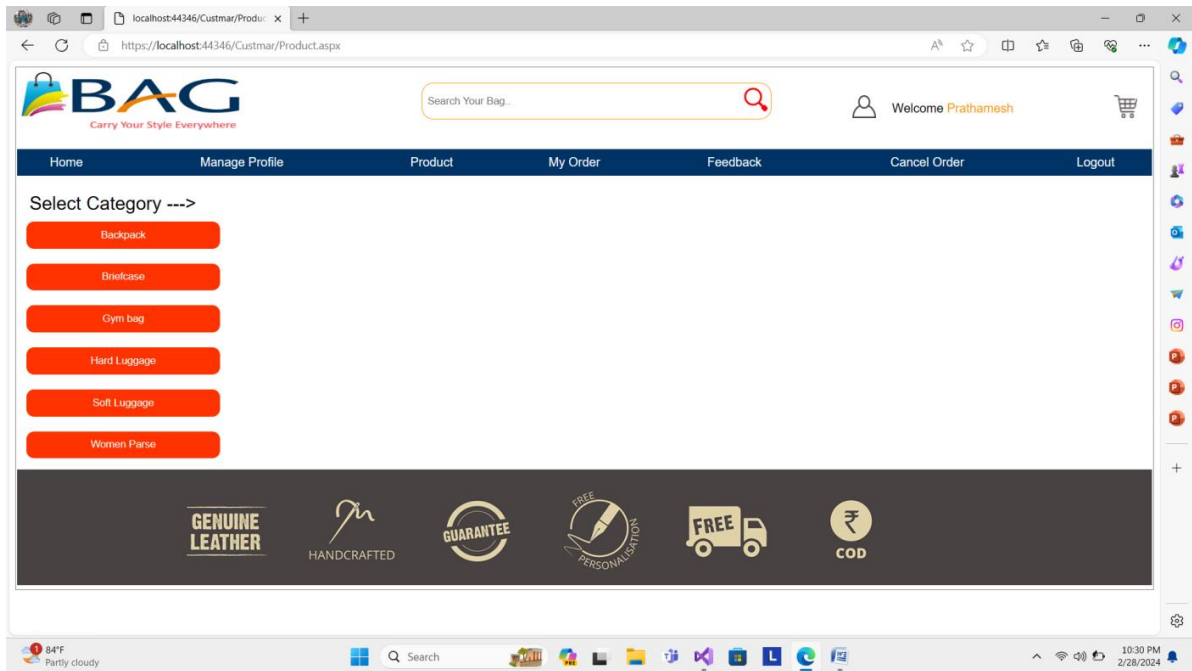

## CUSTOMER PANEL

After Login user enter into the Customer Panel

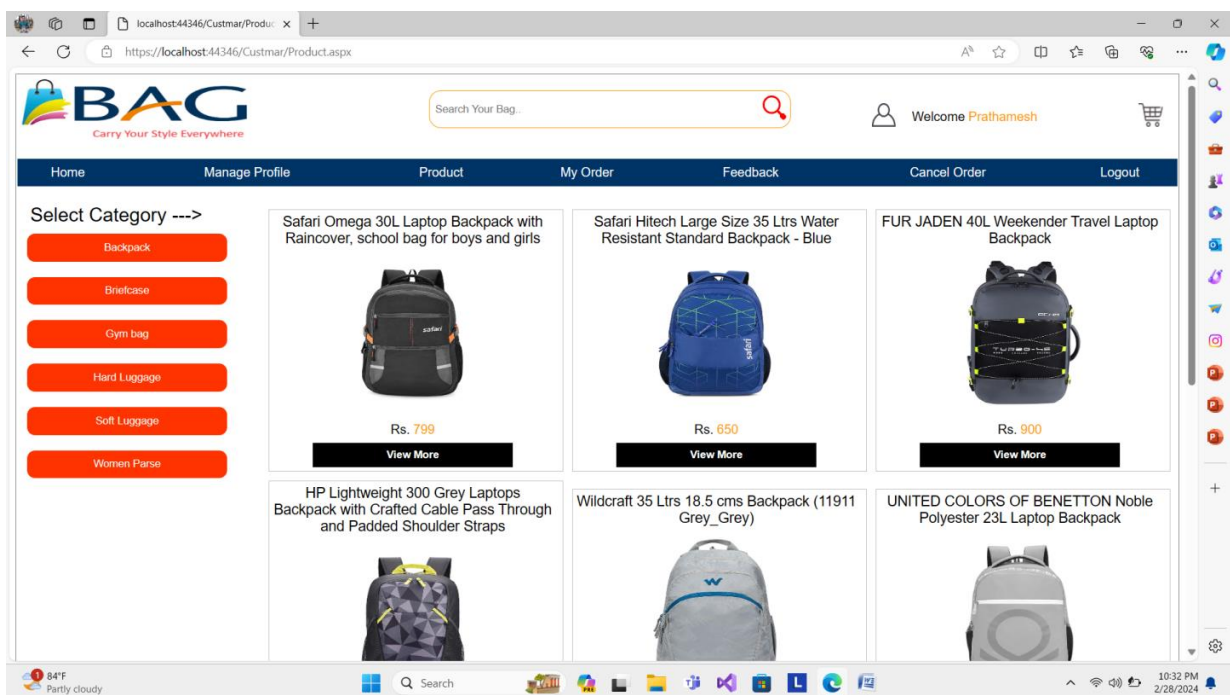

## CATEGORY PAGE

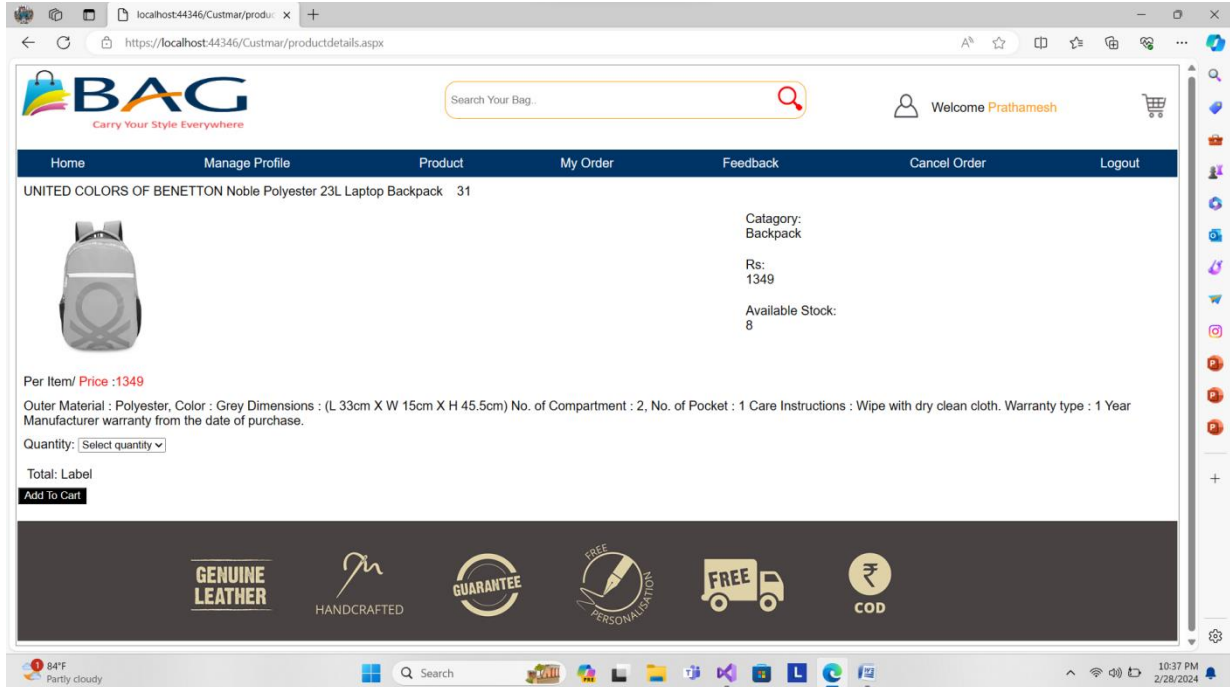

In this page Customer can see the Categories.

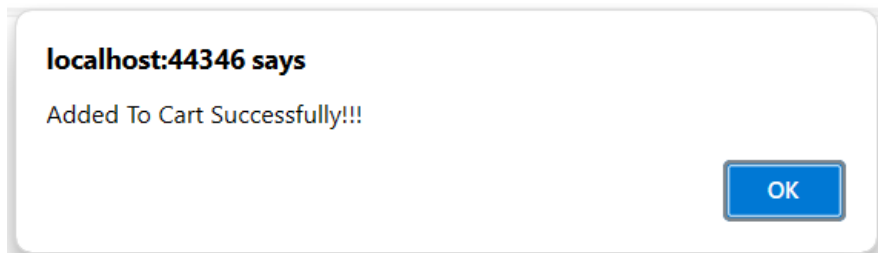

In this page after clicking on particular category customer can see the product of that category.

In this page after clicking the View More Button customer can see the Product Details page. Here He/ She can add the product in to the cart.

After clicking Add To Cart button customer can see the alert message. And the product added into the cart.

After clicking on Cart button Customer can see the cart details page.

# 5.Implementation

## 5.1 SYSTEM REQUIREMENT:

### • Hardware:

- Processor : Intel core i3 & Above
- RAM : 512MBSDRAM
- Hard Disk Space : 80GB and above.
- Monitor : Color.
- Printer : Inkjet/ Laser Printer.

### • Software:

- Operating System : Windows 7 and above.
- IDE : Microsoft Visual Studio 2010.
- Project Platform : .NET.
- Framework : Framework4.0.
- Frontend : ASP.NET with C#.

## **5.2 USER GUIDELINE (USER MANUAL) :**

The Project consists of followings menu's:

1. Home
2. Category
3. Products
4. About Us
5. Registration
6. Feedback

### **1) Home:**

A Home page is a primary web page that a visitor will view when they navigate to a website.

### **2) Product Category:**

A Product Category page is a web page where first you can see the categories in by clicking on the particular category button of Product category after that you can see the product page where you get little bit information of products in this page, we provided the view more button to see the overall information of selected product.

### **3) About Us:**

An About Us page is a web page on website that tells your reader all about you. It includes a detailed description covering all aspects of website.

### **4) Registration:**

The Registration in project is categorized into 1 categories

#### **1) Customer:**

This is the registration page for user where he can fill information about him and here user can create his own username, password and become a customer of our website.

### **5) Feedback:**

This is the feedback page where customer can give his valuable feedback and he/she can do complaint also.

# 7. Conclusion & Future Enhancement

## **CONCLUSION:**

The present of computer system 'Bag Shop' is useful for shop to keep the information of goods. This system is developed as simple as possible to use. Being user friendly software, the user does not find difficulty in using it.

This system is designed for shops to sell their products locally and for customers to connect to the shop. We create an online platform for shops to enhance their business.

Our web application successfully gives the following functionalities:

- Online Platform for customer and shop to connect each other.
- Manage Category, Products, Shops.
- Produce daily report.

## **FUTURE ENHANCEMENT:**

- In this system we can add different panel mode system like debit credit card.
- In this system we add cart option for creating a wish list of product for customer.
- In future we can deliver products all over India.

## **Advantages:**

- 1) It Simplifies Manual work.
- 2) It is computerized system.
- 3) It gives accurate information.
- 4) Reduces use of Paper.
- 5) Produces daily reports.
- 6) Provides honest client feedback & review.
- 7) It's not required to visit the shops.
- 8) User can get products from their place. It is time saving process.
- 9) Make work easier, faster, and less time consuming.

## **LIMITATIONS :**

- In this system customer cannot return product.
- In this system customer cannot create a wish list.
- The website is limited for only limited area.
